

The New Era Data Consulting Services Plan

The DCS process focuses on being data driven, comprehensive, adaptable, user-focused, and coordinated. DCS provides an integrated framework of services to enable organizations to deploy technology to end-users quickly and with increased satisfaction.

Raw Data

Disparate data from various sources provided by the Client. In this form its essentially unusable.

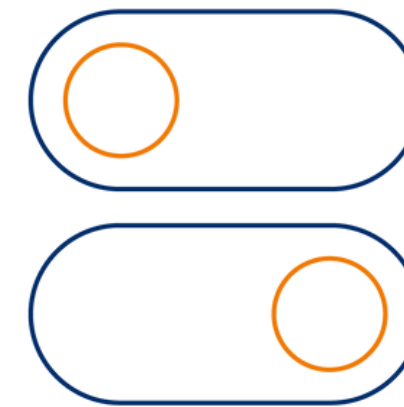

Meta Data

Correlate supplementary attributes to data, as well as generate links between the various data sources and calculate informational data.

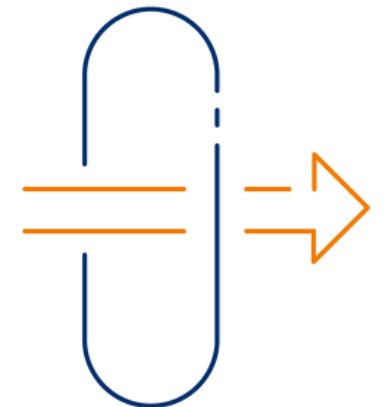

Segmentation

Create functional migration groups to assist in the organization of communications, reporting and migration batches.

Triggers

Processes executed by manual intervention or through changes in data.

Gates

Rules to prevent further migration processing. All gates generate historical records for reporting and troubleshooting.
